

# A smarter way to sign your document

Sign and certify documents securely from desktop or device without complex setups or data sharing. Protect your data with advanced signature encryption and verification, without sharing your data online.

Digital signature tools save time, but can be a security blindspot. dSign is for businesses who understand the value and the risk of online transactions — and prefer not to share their data.

## d:Sign Features

### Signing options

Draw, type or upload via desktop and mobile

### Secure signature capture

Signature and document data are securely interlinked

### Smart contracts

Tamper-proof automated agreements

### Decentralized platform

Open architecture to protect privacy and secure data

### Robust authentication

Authenticate users via email, phone or ID partners

### Versioning

Full document history and versioning for a shared truth
